Outline

- Paper Writing
- Presentation
- Background Research (Survey Resource)
Research Paper Writing - Format

- Format is of most importance.
  - Why?
    - All the papers in “inappropriate” format will be rejected before the review process (in screening stage).

- Commonly-used format for CS papers
  - ACM format
    - Conference
    - Journal (Transactions)
  - IEEE format
    - Conference
    - Journal (Transactions)
ACM Paper Format

- ACM SIG Proceedings Templates
  - Website: http://www.acm.org/sigs/publications/proceedings-templates

ACM Word Template for SIG Site

1st Author
1st author's affiliation
1st line of address
2nd line of address
Telephone number, incl. country code
1st author's E-mail address

2nd Author
2nd author's affiliation
1st line of address
2nd line of address
Telephone number, incl. country code
2nd E-mail

3rd Author
3rd author's affiliation
1st line of address
2nd line of address
Telephone number, incl. country code
3rd E-mail

ABSTRACT
In this paper, we describe the formatting guidelines for ACM SIG Proceedings.

Categories and Subject Descriptors
D.3.3 [Programming Languages]: Language Constructs and Features — abstract data types, polymorphism, control structures.
This is just an example, please use the correct category and subject descriptors for your submission. The ACM Computing Classification Scheme: http://www.acm.org/dcs/cscind1008/.

3. TYPESET TEXT
3.1 Normal or Body Text
Please use a 9-point Times Roman font, or other Roman font with serifs, as close as possible in appearance to Times Roman in which these guidelines have been set. The goal is to have a 9-point text, as you see here. Please use sans-serif or non-proportional fonts only for special purpose such as...
3.6 Page Numbering, Headers and Footers
Do not include headers, footers or page numbers in your submission. These will be added when the publications are assembled.

4. FIGURES/CAPTIONS
Place Tables/Figures/Images in text as close to the reference as possible (see Figure 1). It may extend across both columns to a maximum width of 17.78 cm (7").

Captions should be Times New Roman 9-point bold. They should be numbered (e.g., “Table 1” or “Figure 2”), please note that the word for Table and Figure are spelled out. Figure’s captions should be centered beneath the image or picture, and Table captions should be centered above the table body.

5. SECTIONS
The heading of a section should be in Times New Roman 12-point bold in all-capsitals flush left with an additional 6-points of white space above the section head. Sections and subsequent subsections should be numbered and flush left. For a section head and a subsection head together (such as Section 3 and subsection 3.1), use no additional space above the subsection head.

5.1 Subsections
The heading of subsections should be in Times New Roman 12-point italic with initial letters capitalized.

6. ACKNOWLEDGMENTS
Our thanks to ACM SIGCHI for allowing us to modify templates they had developed.

Preparation of Papers in Two-Column Format for Conference Proceedings Sponsored by IEEE

J. Q. Author
IEEE Conference Publishing
445 Hoes Lane
Piscataway, NJ 08854 USA

Abstract—These instructions give you basic guidelines for preparing papers for conference proceedings.

I. INTRODUCTION

Your goal is to simulate the usual appearance of papers in an IEEE conference proceedings. For items not addressed in these instructions, please refer to the last issue of your conference’s proceedings or your Publications chair.

Preparing your Electronic Paper

Prepare your paper in full-size format, on US letter paper (8 ½ by 11 inches). For A4 paper, use the A4 settings.

Type Sizes and Typefaces: Follow the type sizes specified in Table I. As an aid in gauging type size, 1 point is about 0.35 mm. The size of the lowercase letter “j” will give the point size. Type the numbers in lowercase.

II. HELPFUL HINTS

A. Figures and Tables

Position figures and tables at the tops and bottoms of
parentheses to avoid ambiguities in denominators. Punctuate equations with commas or periods when they are part of a sentence, as in

\[ a + b = c. \] (1)

Symbols in your equation should be defined before the equation appears or immediately following. Use "(1)," not "Eq. (1)" or "equation (1)," except at the beginning of a sentence: "Equation (1) is ..."

E. Other Recommendations

The Roman numerals used to number the section headings are optional. If you do use them, do not number ACKNOWLEDGMENT and REFERENCES, and begin Subheadings with letters. Use two spaces after periods (full stops). Hyphenate complex modifiers: "zero-field-cooled magnetization." Avoid dangling participles, such as, "Using (1), the potential was calculated." Write instead, "The potential was calculated using (1)," or "Using (1), we calculated the potential."

Use a zero before decimal points: "0.25," not ".25." Use "cm³," not "cc." Do not mix complete spellings and abbreviations of units: "Wb/m²" or "webers per square meter," not "webers/m²." Spell units when they appear in text: "...a few henries," not "...a few H." If your native language is not English, try to get a native English-speaking colleague to proofread your paper. Do not add page numbers.

"principal" and "principle." Do not confuse "imply" and "infer." The prefix "non" is not a word; it should be joined to the word it modifies, usually without a hyphen. There is no period after the "et" in the Latin abbreviation "et al." The abbreviation "i.e." means "that is," and the abbreviation "e.g." means "for example." An excellent style manual for science writers is [7].

ACKNOWLEDGMENT

The preferred spelling of the word "acknowledgment" in America is without an "e" after the "g." Try to avoid the stilted expression, "One of us (R. B. G.) thanks ..." Instead, try "R.B.G. thanks ..." Put sponsor acknowledgments in the unnumbered footnote on the first page.

Editing Tool

- **Microsoft Word**
  - Table & Figure
  - Data
    - Excel
    - MATLAB

- **Latex - *Recommend!***
  - A typesetting system that is very suitable for producing scientific and mathematical documents of high typographical quality.
  - Easy to edit, but not a WYSIWYG tool.
  - Tutorial:
    - *The Not So Short Introduction to LATEX*
What makes a good paper?

- Does the paper present a significant and original contribution?
- Does the work demonstrate originality?
- Is the validity of the work adequately demonstrated?
- Is the work clearly and concisely described?
A. Reader Interest

1. Which category describes this manuscript?
   - Practice / Application / Case Study / Experience Report
   - Theory
   - Technology
   - Research

2. How relevant is this manuscript to the readers?
   - Very Relevant
   - Relevant
   - Interesting - but not very relevant
   - Irrelevant
B. Content

1. Please explain how this manuscript advances this field of research and/or contributes something new to the literature.

2. Is the manuscript technically sound?
   - Yes
   - Appears to be - but didn't check completely
   - Partially
   - No
C. Presentation
1. Are the title, abstract, and keywords appropriate?
   - Yes
   - No

2. Does the manuscript contain sufficient and appropriate references?
   - References are sufficient and appropriate
   - Important references are missing; more references are needed
   - Number of references are excessive

3. Does the introduction state the objectives of the manuscript in terms that encourage the reader to read on?
   - Yes
   - Could be improved
   - No
IEEE Transactions on Computers - Review Form

4. How would you rate the organization of the manuscript? Is it focused? Is the length appropriate for the topic?
   - Satisfactory
   - Could be improved
   - Poor

5. Please rate the readability of the manuscript.
   - Easy to read
   - Readable - but requires some effort to understand
   - Difficult to read and understand
   - Unreadable
6. Should the supplemental material be included?
   - Yes, as part of the digital library for this submission if accepted
   - Yes, as part of the main paper if accepted (cannot exceed the strict page limit)
   - No, it should not be included at all

7. If yes to 6, should it be accepted:
   - As is
   - After revisions.
IEEE Transactions on Computers - Review Form

Evaluation

Please rate the manuscript. Explain your choice.

- Award Quality
- Excellent
- Good
- Fair
- Poor
Writing Reference Books

  - Easy to read, very useful as the first writing book to read.
  - in its “brevity, clarity, and prickly good sense, it is, unlike most such manuals, a book as well as a tool” - *The New Yorker*

  - Also easy to read, like a manual for checking different issues

- *Writing for Computer Science*, by Justin Zobel
Structure of a Paper

- Introduction
- Approach
- Implementation
- Results
- Evaluation
- Related Work
- Conclusion & Discussion
Presentation (Conference)

- **Practice talks**
  - Practice makes perfect.

- **Things to Think About**
  - Oral Communication is different from written communication
    - K.I.S.S. (Keep It Simple, Stupid)
    - Repeat key insights (Forecast, Tell, Summary)
  - Think about your audience
    - Expert or not?
  - Think about your rhetorical goals
    - Show contribution
  - Prepare
    - Possible questions from audiences
Conference Talk Outline (20-30 min)

- Title/author/affiliation (1 slide)
- Forecast (1 slide)
- Outline (1 slide)
- Background
  - Motivation and Problem Statement (1-2 slides)
  - Related Work (0-1 slides)
  - Methods (1 slide)
- Results (4-6 slides)
- Summary (1 slide)
- Future Work (0-1 slides)
- Backup Slides (0-3 slides)
How to do a survey (Background research)
